Resolution #867-1972, Authorizing the Preparation of Specific Plans for Phase I of a Countywide Bicycle Facilities Program.	

SUFFOLK COUNTY COMPREHENSIVE BIKEWAY RESOLUTION

WHEREAS, the Suffolk County Planning Commission recognizes the nationwide renewed interest in bicycle riding as a major form of recreation, and

WHEREAS, bicycling activities have been hailed by prominent medical authorities as contributing significantly to physical and mental fitness of participants, and

WHEREAS, locally, cyclists in Suffolk County rely on the heavily traveled streets and roads, and

WHEREAS, such practice in 1971 has resulted in 550 reported accidents involving auto-bicycle collisions of which 12 resulted in loss of lives of the cyclists, most of which were under the age of 15, and

WHEREAS, a Comprehensive Bikeway Plan has been prepared by the Suffolk County Planning staff to promote the health safety, and recreation enjoyment of the people of Suffolk County

RESOLVED, that the Suffolk County Planning Commission recommends to the County Executive and the Legislature the Comprehensive Suffolk County Bikeways Plan be adopted.

## STUDY RECOMMENDATIONS

- 1) The school districts should be responsible for the annual registration of all bicycles, the information to be filed with the local police departments. The registration should include a safety inspection of the bicycle, and cyclist education.
- 2) All new county road and park projects should include bicycle paths where such paths would be a valuable addition to existing or proposed county or town bicycle path systems.
- 3) Developers should provide bicycle paths in new developments where required by the respective towns.
- 4) Bicyclists should be required to ride in bicycle lanes where provided.
- 5) Ample bicycle parking facilities should be provided at all schools, parks, shopping areas, libraries and other public facilities.

It is the intent of the Comprehensive Plan that all points of scenic, historic, or recreational interest be easily accessible by bicycle. Additional paths should be provided where necessary to achieve this goal.

## PREFATORY COMMENTS

Cycling, which was formerly a pastime for children, has developed into a serious endeavor for adults. Concern for the rapidly deteriorating environment and the desire to alleviate that deterioration has led increasing numbers of people to cycling. The benefits of bicycling are two-fold; bicycles are non-polluting machines which also provide excellent, medically approved, exercise to people of all ages.

Bicycles are governed by the State Traffic Laws and it is the responsibility of government to provide adequate facilities for these legally recognized vehicles. The Suffolk County Executive and Legislature, in recognition of this responsibility, have provided for the creation of bikeways in the Capital Program for Suffolk County. In particular, County Legislator Louis T. Howard (District 14) has created a Committee specifically devoted to this subject.

The almost total dependence on the automobile has had many harmful effects on the quality of life in the County. Expressways and parkways, for example, separate communities from each other and the automobiles which they carry produce high noise levels, reduce the enjoyment of the outdoor environment, create traffic jams and generate tons of harmful pollutants into our air. In terms of the community, 50% of all court and police work involves the automobile.

Further inconveniences include the tremendous economic drain on families for maintaining two or three cars. Millions of dollars are devoted annually for physical fitness programs for youth, yet we insist on transporting our children to school by cars and buses. Adults drive to health spas where they try to keep physically fit. Shopping centers are located to encourage car access. Rush hour traffic jams cannot be eliminated because no alternate means of travel has been provided. Our schools and colleges teach independence, yet we foster a transportation system of almost total dependence on one means of transportation; the automobile.

Ever since Earth Day 1970 was observed in this country, Americans have become more aware of the problems their environment is facing. The bicycle has come to symbolize this new spirit of ecological concern.

The Planning Department, in response to the increasing interest in bikeways, has prepared this study in order to delineate a comprehensive approach to the provision of bicycle facilities in the County. We realize that an ideal solution would involve the construction of roadways for the exclusive use of non-motorized bicycles. Wherever possible, we have recommended that such facilities be built. However, in an already urbanized set of communities, it is often impossible to achieve linkages between home and school or play, or other areas of interest, without tra-

versing a portion of the existing road network. In our research for this project, which included examples of similar efforts throughout the United States and in many countries of Europe, we could not discover any departure from this approach. Therefore, a portion of the County-wide program has to include the use of existing roads. We made every effort to minimize such reliance and have tried to avoid safety hazards by including design recommendations to separate bicycle traffic from motor vehicles. Looking to the future, we have recommended that new communities be planned in such a way as to provide for bicycle traffic totally separated from automobiles.

In the course of this study we worked with various public officials at the County and local level as well as concerned and knowledgeable citizens representing bicycle enthusiasts throughout the County. Hopefully, this report will not only establish a framework for an overall County network, but will serve as a catalyst for the initiation of local programs to augment our efforts.

## SUFFOLK COUNTY COMPREHENSIVE BIKEWAY STUDY

### GUIDING POLICIES AND CRITERIA FOR BIKEWAYS

1. The development of bikeways for transportation inside parks, and touring bikeways connecting parks and specific points of interest, such as overlooks and historic sites.

Bicycles are an ideal way of enjoying and getting around a park. They are quiet, operate at low speeds, and cause no harmful environmental impact. In large parks, they provide a needed scale of transportation, enabling a rider to enjoy parts of a park beyond his walking range. The very same bikeways in parks and greenways can accommodate both bicyclists and hikers. Inter-connecting bikeways between parks and/or specific points of interest would increase the opportunities for resident and tourist bicyclists as well as offer an alternate means of reaching parks and scenic sites.

2. The development of bikeways to provide an alternate mode of transportation in neighborhoods, to central business districts, to work, to schools and other public facilities, and to railroad stations and other transportation hubs.

Bicycles provide a practical means of traveling short distances without using the automobile. The benefits of bicycles include:

- a) reducing parking and traffic congestion in the central business districts;
- b) an inexpensive way of traveling within communities;
- c) encouraging people without cars (teenagers, school children,

elderly, housewives) to use bicycles to gain wider access to their communities; and

- d) providing a way to travel to school via bikeways, giving a potential tax savings to taxpayers in the form of reduced need for busing, while at the same time providing children with healthy exercise.

A Santa Cruz, California tannery, which helped its employees purchase bicycles found that the employees were friendlier to each other as a result of having something in common. The president of the company stated that bicycles have brought his employees together. "People at the plant who never met before are now talking to each other about their bikes. They're even organizing weekend tours and picnics." In addition, commuting to work by bicycle instead of by car resulted in a savings to each worker of \$700-1,000 a year.

- 3. The development of bikeways for transportation inside large complexes, such as campuses, industrial parks and hospitals.

Travel on campus is very often a problem because the distance to classes is usually too far to walk and too near to drive by car. In this situation, it seems that the bicycle is suited to the scale of a campus in providing the appropriate means of transportation.

Other obvious benefits are a reduced need for parking and less traffic congestion on campus roadways.

- 4. The development of inter-community bikeways throughout Suffolk County.

Inter-community bikeway links between local bikeway systems has

many advantages. It provides the cyclist with more choice as to where he can go both for pleasure and for basic transportation. Inter-community bikeways also provide a means of linking up otherwise isolated communities and neighborhoods.

### THE CURRENT SITUATION

Not since the 1890's, just prior to the introduction of the automobile, has America been more involved with bicycling. The sport of bicycling has become America's favorite participant sport. Statistics indicate there were 67 million bicycle riders in 1969; compared with 43 million boaters, 42 million campers, 24 roller skaters, and 19 million softball players.

In 1965 there were 5 million bicycles sold, representing twice the number sold in 1955; in only the first six months of 1971, 8,000,000 were sold. Obviously, the bicycle has become a very popular device in providing for the transportation, recreation, and physical fitness needs of the people.

### POPULARITY OF THE BICYCLE

The bicycle has always been popular for many reasons, including:

1. special talents are not needed
2. there are no age limits
3. traffic and parking levels are reduced (12 bicycles can park in a space for one car)
4. the rider can set his own pace
5. it is relatively inexpensive to buy and service
6. it is available in a great variety of sizes and styles

7. it aids in maintaining physical fitness
8. it is a quiet, non-polluting machine
9. the slower pace of the bicycle allows for the enjoyment of the outdoors as well as interaction with others.
10. it is a skill that once learned is never lost

### HISTORY OF BICYCLES

The first bicycle was called the walk-along, and was invented in 1790. As the name implies, the device was pushed along by the rider's feet. Improvements on the walk-along were made in 1810. A walk-along called the Draisine, which had a steering bar connected to its front wheel was invented in 1816 by Baron von Drais. This type of bicycle was introduced in England in 1818. The English called them hobby-horses, dandy horses, and swiftwalkers. A metal bicycle with pedals attached to the front wheel was invented in 1885 by the French locksmith, Ernest Michaux. The first patent for a bicycle was issued to Pierre Lallement in 1866 for a device he called the boneshaker.

The high-wheeler bicycle was introduced in England in 1873. It had a front wheel almost as tall as a man while the back wheel was very small. The problem with the high wheeler was balancing and often the rider fell from his seat above the front wheel.

The safety bicycle, which had both wheels the same size, appeared about 1880. By 1890, many improvements were made in the safety bicycle such as rubber tires, ball bearings for wheels, coaster brakes, cushion saddles, and adjustable handle bars.

1889 marks the year of America's first bicycle craze, which was

also the year that the air-filled rubber bicycle tire was introduced. The 1890's just before the coming of the automobile, was the bicycle's most popular era in the United States.

Bicycling was very popular in Suffolk County during the 1890's. There were "Wheelmen and Wheelwomen" Clubs in many localities. They were often effective in getting sidepaths and bicycle paths built in the County.

After 1900, the popularity of the bicycle declined with the advent of the automobile. The modern bicycle, a light weight ten speed derailleur (or gear changer) type was introduced in the United States by Schwinn in 1958. However, it took the rising interest in ecology and the environment, ten years later, to catapult the bicycle to the forefront of people's attention. The bicycle's non-polluting and healthful features make it popular with people concerned about the quality of the environment.

#### HEALTH BENEFITS OF BICYCLING

Many health benefits are gained from bicycling. According to Paul Dudley White, prominent doctor and long time proponent of bicycle riding, bicycling can vastly improve health. Among the healthful aspects of bicycling are:

1. promoting good muscle tone, aiding circulation, and strengthening the heart and lungs;
2. aiding the nerves, by promoting sleep without the use of tranquilizers and helping maintain equanimity and sanity;
3. aiding digestion and preventing ulcers;
4. assisting weight control;
5. increasing longevity (like any healthful exercise) by reducing high

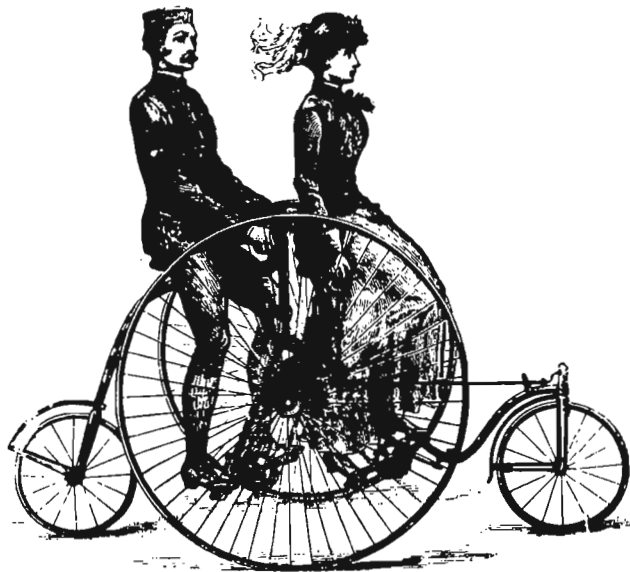

blood pressure, coronary thrombosis and diabetes.\*

### SAFETY CONSIDERATIONS

The increasing use of the bicycle has created a public demand for bikeways, based on safety considerations.

In 1970 there were 481 reported accidents involving collisions between motor vehicles and bicycles in Suffolk County. These accidents resulted in six deaths and 399 injuries. In 1971 there were 550 reported accidents resulting in 500 injured and 12 fatalities.

Eighty-five percent of the victims were under the age of 15 and 94 percent were under 20. Bicycle accidents have increased in Suffolk County at a greater rate than population growth, about 157 percent in the past decade compared with a 68 percent rise in population. This pattern can be reversed by providing bikeways to separate the motor vehicle from the bicycle.

---

\*Although this has yet to be clinically demonstrated

## COMPREHENSIVE BIKEWAY PLAN

The Comprehensive Bikeway Plan is a means of safely linking people to places of interest via bikeways. The Planning Department proposes a bicycle pathway system for the entire county.

The largest scale of the Plan is a major countywide bikeway network connecting all the towns of Suffolk County. In an effort to reduce costs and maximize benefits, the Plan proposes the use of existing rights-of-way (ROW's) such as LILCO ROW's, Expressway service roads, abandoned railroad ROW's and greenbelts.

The inner-town plan would consist of linking federal, state, county, and town parks and school grounds. Low volume local roads with connections to the County Bikeway network are the major portion of the inner-town plan. The role of the county would be to act as coordinator to assure that an interlocking system is achieved. The county, in terms of economic input, would be responsible for building the major inter-connecting countywide links of the bikeways, including the construction of bikeways within all county-owned properties.

The town's role would consist of constructing the local bikeway routes within their respective jurisdictions (see Smithtown Plan). The Incorporated Villages would be responsible for providing the needed bikeway routes within their boundaries.

The federal and state role would consist of providing bikeway links within their properties (parks, national seashores, etc.) located in Suffolk County.

## DESIGN STANDARDS

A bikeway is a pathway set aside for the exclusive use of bicycle riders. In the Comprehensive Bikeway Plan there are two types of bike-ways employed:

1. A bike lane separated from auto traffic by a raised line on the roadway
2. A paved bike path in a park, greenbelt, utility rights-of-way or drainage area which is not connected to automobile traffic

The layout of a bikeway requires the kind of sensitivity which was used to design some of our region's better roads. An excellent example of good design is the Bronx River Parkway connecting the Bronx with Westchester County. This parkway has been aligned with a minimum of cut and fill, resulting in naturally sloped curves located between frequent ponds, overhanging shrubbery, and large stands of both deciduous and evergreen trees.

Bikeways should be constructed in a similar fashion. Important elements that were considered in designing the bikeway are gradual rise and depression of topography, use of curves, straight-aways, wooded areas for secluded paths, steep hills to provide up and down dimension to the path and the use of lake shore edges to add character and variety to the path. Historic buildings cultural centers, institutions, college campuses, central business districts, parks, arboretums, and museums are some of the elements that are linked up by the bikeway system.

Factors considered in locating the route of the Bikeway were:

1. desired length of the trail
2. points of interest (schools, parks, historic sites, etc.)

3. roads with a low volume of auto traffic
4. scenic landscape
5. ultimate destination

### LAYOUT AND CONSTRUCTION OF A BIKEWAY

The major factors to be considered in laying out a bicycle path are the grades, length of paths, widths of paths, turning radii and bridges.

#### Grades

The maximum recommended grade for comfortable bike riding is 3%, but this can vary depending on the length of the incline.

#### Length of Path

The length of the path should be dependent on the average cyclist's speed of 10 m.p.h. and the number of points of interest along the route.

#### Turning Radius

The turning radius is strictly dependent on the speed of approach and the degree of turn. Opportunity should be provided for braking before the turn.

#### Bridges

The width of the bikeway bridge should be wider than the bikeway, roughly 7.5 to 10 feet to accommodate both bike and pedestrian use safely.

#### Clearance

All low hanging branches on the bicycle path should be kept to a minimum of 7' to 10' above grade, to allow for clearance. All dead or diseased trees which could fall across the path

### Drainage

Steps should be taken to insure that water is removed from the top of the path since surface water could wash out sections of the trail or form puddles along the path. In addition, water must be removed from under the path so that heaving and buckling will not occur during winter freezing.

### Bases

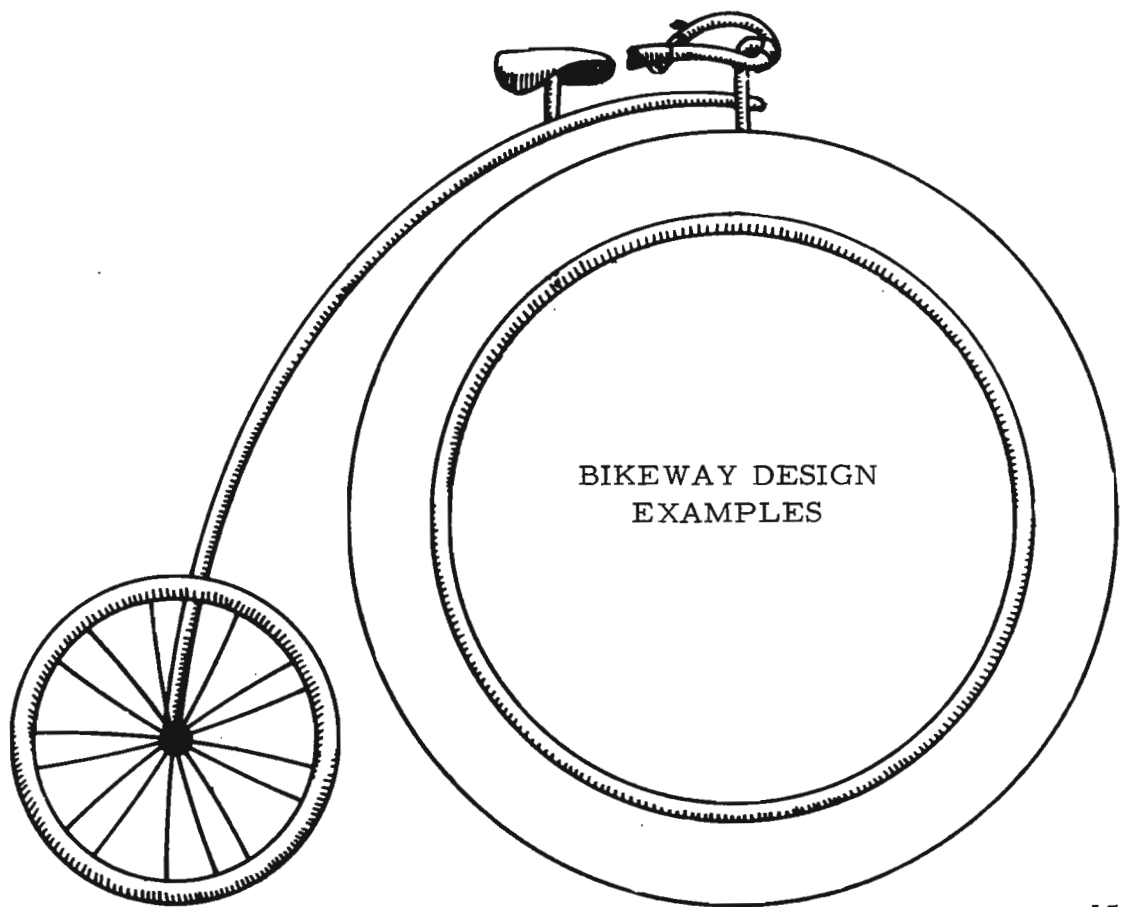

The sub-base for the bikeway should be prepared by removing all top soil, stumps, and roots. Next, the sub-base should be compacted and a layer of crushed stone or slag should be added for stability and drainage. The many types of acceptable finished sub-bases for bike paths include compacted stone chips, soil cement, concrete, and stabilized earth using aggregate. The combination of stone base and asphalt surfacing is probably the least expensive method.

### Movable Walks

Wooden board walks make excellent bike paths on sandy beach areas where shifting sand might cover an asphalt surfaced path. Movable lengths constructed of pressure treated two by fours (to keep planks in contact with the soil from rotting) held together by metal or nylon wire, spaced one inch apart are used.

## BIKEWAY ALONG A SHOPPING STREET

# PAINTED SYMBOLS AT HIGH VOLUME INTERSECTIONS

## THE COMPREHENSIVE BIKEWAY CATALOG

The Comprehensive Bikeway Plan represents a countywide network connecting the towns of Suffolk County. The inner town plan is not shown on the county wide plan but is listed in the Comprehensive Bikeway Catalog by Town.

The Comprehensive Bikeway Plan, as illustrated, use the node system for identifying the proposed bikeways. Each node represents the intersection of two or more bikeways or the end of a bikeway. Each town is numbered separately. In order to use the Comprehensive Bikeway Map, one selects the nearest node number to point of origin and destination, and then selects the most convenient route by node. The Bikeway Catalog by Town which follows, lists all of the bikeways by node numbers lowest to highest. A cost breakdown of Phase 1<sup>1</sup> and the remainder of the system to be constructed is illustrated on Chart I and II.

A museum list (by nearest node), and a sample bikeway sub-division amendment are added to the Catalog.

An expanded list of all points-of-interest in the county (by nearest node) should also be compiled.

<sup>1</sup>Phase 1 represents the first step in achieving a complete bikeway system as allocated by the Suffolk County Legislature in the 1972 Capital Budget Program for \$250,000.

Webb House	Village Lane, Orient	8
Whitaker Historical Collection	Southold Free Library Main St. , Southold	5

### BIKEWAY SUBDIVISION AMENDMENT

As part of an on going bikeway program, plats for new subdivisions should include a bikeway plan to be approved with the plat. The bikeway will include an eight (8') foot wide by (3" ) inches deep asphalt paved surface, with bikeway signs, located in an area away from automobile traffic. The bikeway should be linked to local public facilities and shopping centers. In cases where it is unavoidable to locate the bikeway separated from an automobile facility, appropriate warning in the form of signs and painted lines will be utilized. The builder of the subdivision will have to post a bond similar to that now used to secure sidewalk construction.
